1 Appendix C: Detection Limits and Operating Points

1.1 Objective

Comprehensive detection theory analysis including ROC curves, sensitivity analysis, operating regions, and noise floor characterization for IR olfactory detection systems.

1.2 Methods (src)

- `src/case_studies/detection_limits.py`
 - `min_detectable_power(temperature_k, bandwidth_hz, snr_min_db)` - Thermal noise limited detection
 - `roc_analysis(signal_power, noise_power)` - ROC curves and optimal thresholds
 - `detection_performance_vs_snr(snr_range_db, pfa_target)` - Performance curves and MDS
 - `sensitivity_analysis(power_range, temp_range, param_variations)` - Parameter sensitivity
 - `operating_regions_analysis(power_range, temp_range)` - SNR contours in operating space
 - `noise_floor_analysis(freq_range, temperature_k)` - Multi-component noise analysis
 - `detection_range_analysis(tx_power, antenna_gain, frequency, sensitivity)` - Range calculations
 - `optimize_detection_parameters(constraints, objectives)` - System optimization

1.3 Script and Outputs

- Script: `scripts/generate_detection_limits.py`
- Data: `output/data/detection_limits_comprehensive.npz`
- Figure: `output/figures/detection_limits_comprehensive_analysis.png`

1.4 Figure

Figure 1: Comprehensive detection analysis: ROC curves with AUC metrics, detection performance vs SNR showing minimum detectable signal (MDS), operating regions in power-temperature space, noise floor components, detection range analysis, and parameter optimization. Includes processing gain effects, optimal threshold selection, and performance trade-offs for IR olfactory detection systems.

1.5 Equation References

- Minimum power: see (??)
- Capacity: see (??)

1.6 Reproducibility

- Run: `python3 scripts/generate_detection_limits.py`
- Artifacts saved to `output/data/` and `output/figures/`.
- Deterministic operating points via `src/config.set_random_seed(42)`.

1.7 Cross-References

- Methods: ??
- Symbols: ??
- Math appendix: ??
